Letter of reference Terje Hjelset

In the autumn semester of 2018 Terje Hjelset worked as seminar leader in the course MAT1100 Mathematics for economists and in the spring semester of 2019 in the course SFO1100 Statistics for economists. These courses are introductory courses in mathematics and statistics for our business/economics students.

His job involved running weekly seminars, assisting the students with understanding the mathematical and statistical topics and solving exercises.

Terje has a solid understanding of mathematics and statistics at this level. He worked independently and responsibly, and communicated well with the students, lecturer and myself. We were very satisfied with his contributions, and he has my best recommendations.
